

* Compare Version Numbers

2.032.1.001

to split by . we have to do like `split(" ")`
as `split(".")` means ^{any} one char.

then we have to iterate through each string & convert to int. & compare.

- another approach is that we can iterate through each version till we find a (.). Till that we can make the int of version number by multiplying by 10 & adding $(\text{char val} - '0')$ & then compare them.
