

No: _____

Date: ____/____/____

* Valid Sudoku

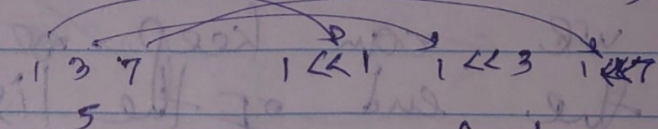

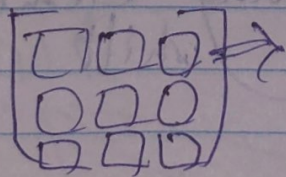

Can do using one set to store all row values, column values & ~~per~~ box values, in different formats.

rows \rightarrow val(row)

cols \rightarrow (col) val

box \rightarrow (row) val (col)

- Beautiful approach to use is bit manipulation for row, col, box \rightarrow store in 3 arrays.

take $\&$ and check for 0
then $|$ and store in
that place.
